

Panel Discussion on Peet Effects

Jinan University Workshop on Peer Effects

Guangzhou, China, November 1 & 2, 2020

Bryan S. Graham

University of California - Berkeley

Policies and Modeling

Policy	Key Features/Challenges	Examples
<i>Associational redistribution</i>	Comp., Curv. Double randomization	Eugster et al. (forth, RESTAT)
<i>Treatment targeting</i>	Network structure Endog. of links, rewiring	Kim et al. (2015, Lancet)
<i>Equilibrium shifting</i>	Network structure 'Strategic' interaction	Calvó-Armengol et al. (2009, RES) Robert H. Frank, <i>NY Times</i>

Worth the effort!

1. Manski (1993) – questions important, extant research is problematic, identification hard.
2. Brock and Durlauf (2001) – questions important, extant research is problematic, identification hard, keep trying.
3. Angrist (2014) – peer effects probably not important, extant research is problematic, identification hopeless, do something else.
